Technical changes reserved.

LacunaSolutions offers with its Smart-LightningSystem® the first LED-based normlight system in which the brightness and the UV content can be controlled! The innovative standard lighting technology developed by LacunaSolutions in 2009 is based on a combination of different LEDs and intelligent control. This entry-level solution is currently the only product of its kind. Small, lightweight, flexible, ISO compliant. Benefit from the advantages of modern lighting technology in your everyday production. Whether it's the release of printed products and contract proofs, soft proofing on the monitor, quality control or attractive lighting in your workplace, this elegant lamp is a valuable helper. Let us convince you. Call us for details.
